

RETRIEVING TOOL FOR SEALBORE PACKER

DESCRIPTION

This retrieving tool is required to retrieve Seal Bore Packers. This retrieving tool has a spring-loaded collet which is located below the support ring that keeps the packer locked in a set position. Latch fingers latch into the packer. A pull shears the support ring and releases the packer. If the packer cannot be released, a safety shear ring shears to release the collets and the latch can be backed out with right-hand rotation.

PRODUCT SPECIFICATION

Packer Size (inches)	Packer Bore (inches)	Tool OD (inches)	Tool ID (inches)	Top Connection
