

MODEL "L" KICKOVER TOOL

DESCRIPTION

The Type "L" Kickover Tool is a wireline service tool used to locate side pocket mandrels in the well bore. The "L" Kickover Tool is used with a running or pulling tool to install or retrieve 1" and 1-1/2" O.D downhole control devices.

The "L" Kickover Tool uses a barrel assembly with two spring loaded arms, and locking dogs located at the lower end of the kickover tool. When the desired side pocket is reached, upward movement of the kickover tool shifts the barrel assembly downward and is held in place by the locking dogs. Downward movement of the kickover tool will allow the expanded centering arms to kick the running or pulling tool over to align with the mandrel pocket, allowing installation or retrieval of control devices. A Spacer Bar is required when the "L" Kickover Tool is used to retrieve 1 1/2" O.D. control devices.

PRODUCT SPECIFICATION

Fishneck O.D.	1.187"
Max. O.D. (Arms Retracted)	1.859"
Make Up Length	30.000"
Steel Pin	3/16" x 1.250"
Top Pin Thread	15/16"-10
Bottom Box Thread	15/16"-10
Valve	1" & 1 1/2"
Mandrel Type	KBM, KBMG, MM, MMG
